Air Filter Cleaner Features

- Fully automatic operation
- Cleans round filters from 200mm to 750mm Ø X 700mm long
- Cleans open and closed ended filters
- Efficient 5.5kW dust collector
- Internal & external cleaning
- Vibrating rotating bed
- Fully pneumatic cleaning operation
- Retains primary dust-coating to ensure optimal performance
- Simple operation
- Rugged construction
- Healthy & environmentally safe

Air Filter Flow Table Features

- Checks air flow through air filters easily via a Magnehelic gauge
- Place the filter on top of the table and turn on.
- Too low or too high a reading indicates filter unserviceable.
- Simple and effective method to identify if the filter is blocked, too porous, torn and/or perforated.

AIR FILTER CLEANING

Mammoth air filter cleaning utilises an internal and external dry cleaning, a vibrating bed and an efficient self-cleaning dust collection system.

This ensures your air filters are safely and very thoroughly cleaned.

The dust is fully encapsulated in a 200 litre portable, for safe disposal.

An automatic timer delivers the correct length of cleaning to each filter.

We perform a check for tears and perforations, and complete a flow test after each cleaning cycle to ensure the integrity of the filter.

With a simple process taking only 5 to 10 minutes (depending on the size of the filter) the job is done.

Using the inspection bed and light, a Filter Flow Test Table is also performed.

Mammoth gives you complete confidence while saving you time and money when you service your air filters with us.
